EXPERIENCE

Quantitative Software Developer Intern

Mar 2026 – Present

WIN Capital Funds

International (Remote)

- Built an automated data pipeline that delivers clean, ready-to-use daily market data (NYSE and crypto) to the trading team, by ingesting and processing raw price feeds with Python and PostgreSQL.
- Removed a full day of lag in daily price data by building an intraday-to-daily aggregation process, after catching accuracy gaps in yfinance through automated cross-checks.
- Made deployments repeatable and error-free across development and production by packaging the pipeline with Docker.

Algorithmic Trading Intern

Jan 2026 – Jul 2026

AimFi Capital

Hyderabad, India (Remote)

- Cut daily stock screening from 2–3 days of manual chart-checking to under 5 minutes, by building a real-time engine that scans 2,200+ NSE & BSE stocks for 8+ technical chart patterns in Python.
- Gave traders a ready-to-act shortlist every day by delivering ranked watchlists that automatically flag breakouts, trendline breaks, and bullish & bearish divergences.

PROJECTS

QuantLabs | *React, Node.js, Python*

2026 [Live](#)

- Built a trading-strategy sandbox that lets a user describe a strategy in plain English and automatically turns it into runnable Python backtest code.
- Created an engine that tests strategies on historical price data and reports the risk numbers investors care about, such as Sharpe Ratio and maximum drawdown.
- Added an automatic portfolio rebalancer that controls risk and hedges with options based on live market conditions.

WhyLine | *Python, FastAPI, React, TypeScript*

2026 [GitHub](#)

- Built a real-time anomaly detection system monitoring 10 crypto symbols concurrently, as measured by flagging statistically significant price moves ($|z| \geq 3$) and volume surges ($z \geq 3.5$) within a single 1-minute candle, by combining rolling z-score analysis with a streaming Isolation Forest model over live Binance data.
- Removed the dashboard's cold-start gap, as measured by surfacing roughly 16 hours of annotated historical context immediately on load, by backfilling and back-scanning 1,000 candles per symbol before handing off to live WebSocket streaming.
- Validated detection correctness across the pipeline, as measured by 33 passing automated tests spanning z-score math, outlier flagging, and API parsing, by building a fully offline test suite as part of a 4-person team.

Bhishi | *TypeScript, Compact, Midnight (ZK)*

2026 [GitHub](#)

- Eliminated organizer-fraud risk in traditional chit funds, as measured by holding 100% of member contributions in trustless on-chain escrow, by implementing an 8-circuit smart contract on the Midnight privacy blockchain.
- Protected members from publicly signaling financial distress, as measured by never revealing losing bid amounts on-chain, by sealing every round's bid behind a zero-knowledge commitment cryptographically verified against its reveal.
- Verified correctness of the auction and payout logic, as measured by 14 passing tests covering sealed-bid integrity, one-win-per-cycle guarantees, and full-cycle money conservation, by building a TypeScript simulator mirroring every on-chain circuit assertion.

Ekonos | *Rust, Solana, Anchor*

2025 [GitHub](#)

- Built a fractional asset-ownership protocol on Solana (Turbin3 Capstone) that lets several users co-own and invest in a single high-value asset.
- Designed secure on-chain vaults and token-distribution logic so each user's investment and ownership share is tracked automatically and safely.

Commit-Mirror | *Python, PyPI Package*

2026 [GitHub](#)

- Solved GitHub's contribution-graph loss for developers exiting private organizations, as measured by preserving commit activity with zero code or diff exposure, by building and publishing a pip-installable CLI that mirrors commit metadata to a public repo.
- Enabled fully automated, hands-off operation, as measured by daily syncing via cron/Task Scheduler with a dry-run preview mode, by designing a config-driven setup wizard.

COPYRIGHTS

QuantLabs: NLP Based Backtesting Engine and Portfolio Rebalancer <i>SW-11555/2026-CO</i>	2026
Automated Job Application Using a Smart Browser Extension <i>LD-46176/2025-CO</i>	2025

TECHNICAL SKILLS

Languages: Rust, Python, C++, SQL, JavaScript, TypeScript
Frameworks: Anchor, React, Node.js
Developer Tools: Git, Docker, PostgreSQL, VS Code, Surfpool, Postman
Libraries: pandas, NumPy, Matplotlib

EDUCATION

St. Vincent Pallotti College of Engineering & Technology, Nagpur	CGPA: 9.75
Bachelor of Technology in Computer Science and Business Systems, minor in AI	2023 – 2027

CERTIFICATIONS

Solana Builder Graduate <i>turbin3.org</i>	2025
School of Solana Graduate <i>ackee.xyz</i>	2025
Disaster Risk Monitoring Using Satellite Imagery <i>NVIDIA</i>	2024
Python and SQL for Data Science <i>Scaler</i>	2024

AWARDS AND ACHIEVEMENTS

Blockchain Nexus, IIT Kanpur <i>First Position</i>	2025
Stellar Ragnarok, Nagpur <i>Second Position</i>	2025
Raisoni Tech Hackathon, Nagpur <i>First Position</i>	2024
Outstanding Tech Performer, SVPCET <i>Award Receiver</i>	2024
SIH Expo, SVPCET <i>Third Position</i>	2024
Dataverse, SVPCET <i>First Position</i>	2024

LEADERSHIP

HacKronyX <i>Lead Organizer</i>	2025
Directed a national-level hackathon end-to-end, managing logistics, sponsorships, and volunteers to deliver 3500+ registrations.	
Get On-Chain Workshop <i>Lead Instructor</i>	2025
Led a hands-on blockchain workshop for 70+ participants, taking each one from fundamentals to deploying their first working dApp.	
HackGenX <i>Technical Mentor and Judge</i>	2025
Mentored competing teams and judged final submissions on innovation, design, and technical depth.	
Vigyan Va Ganit Sanskar Shibir (ViBha) <i>Invited Speaker</i>	2025
Presented on AI applications and emerging trends to a general audience in Daryapur, translating technical concepts for a non-technical crowd.
